Problem

The organization needed a hyperconverged solution to replace aging servers and achieve redundancy.

Solution

With StarWind HCA, the organization upgraded its IT infrastructure and got scalability, redundancy, and flexibility needed at a feasible cost.

Problem

Before implementing StarWind HyperConverged Appliance (HCA), **Greenwood Village South** had an IT infrastructure consisted of all aging physical servers and Hyper-V on top. This infrastructure did not allow for high availability (HA) and fault tolerance. In addition, aging servers were difficult to maintain and manage. **Greenwood Village South** needed a solution that provided redundancy and scalability at a cost-effective price point. The other products trialed by the organization were not only more expensive but locked the IT infrastructure into propitiatory hypervisor systems limiting future scalability and agnostic abilities.

Solution

Greenwood Village South has chosen **StarWind HCA** because it offered the most flexibility, scalability, and redundancy at a much more cost-effective price point. **StarWind HCA** became a lifesaver for the organization's IT infrastructure. All of the aging physical servers have been replaced with a single hyperconverged platform, providing the desired HA and fault tolerance and allowing the organization to scale the IT infrastructure as needed. With StarWind, Greenwood Village South has achieved simplicity and ease of systems management. One more benefit is **StarWind ProActive Premium Support** that helps the organization keep its finger on the pulse of the IT environment thereby maximizing its uptime.

> **"**
>
> The StarWind HCA has worked flawlessly reducing the time it takes to perform maintenance and improving the infrastructure uptime greatly.
