

Mr. T Carting ensures continuous business operations and reduces the risk of downtime by establishing a highly available (HA) cluster with **StarWind Virtual SAN**

MR. T CARTING

About the Company

Mr. T Carting Corporation is a family-owned and operated private recycling and waste management business, servicing commercial and residential customers in New York City's 5 boroughs. The company has been keeping New York City clean since 1947.

Industry

Waste Management

Location

North America (United States)

Solution

StarWind Virtual SAN (VSAN)

"StarWind made the most sense in terms of lower costs and not having to do a big hardware repurchase."

Richard Papp, IT Consultant

Challenge

Before StarWind Virtual SAN (VSAN) deployment, Mr. T Carting relied on standalone VM hosts using Hyper-V as the hypervisor. The pressing issue was the lack of high availability (HA), and the existing infrastructure couldn't meet the company's needs without incurring a substantial upfront cost.

Mr. T Carting opted for StarWind VSAN among other storage solutions due to its cost-effectiveness.

Solution

StarWind VSAN addressed the company's challenge by creating a highly available cluster using its existing hardware. This transformed the infrastructure into a 2-node failover cluster, ensuring the much-needed redundancy. The deployment was smooth, and the company did not encounter any installation issues.

The resulting infrastructure satisfies all the requirements, offering a robust and reliable 2-node failover cluster. Mr. T Carting no longer faces the risk of downtime due to hardware failures, enhancing the overall stability of its IT environment.
